The opinion of the referees about this paper is generally very positive. I enjoyed me too reading it and therefore I encourage the authors to submit a revised paper to HESS, by discussing and possibly addressing the remarks of the referees.

I agree with the reviewers that an example of analysis of real data would provide a significant added value to the paper. I also agree with Dr. Koutsoyiannis that an assessment of the long term persistence properties (Hurst-Kolmogorov) of the considered records would also provide a meaningful additional contribution.

I think that these additional developments are not strictly necessary, but they would

C1566

indeed be very significant. I would suggest at least to include a discussion of the above issues in the revised version of the paper.
