

***Interactive comment on “Numerical analysis of Richards’ problem for water penetration in unsaturated soils” by A. Barari et al.***

**N.E.C. Verhoest (Editor)**

[niko.verhoest@ugent.be](mailto:niko.verhoest@ugent.be)

Received and published: 13 November 2009

Although the authors already adapted this version of the paper to the comments of previous review process, major problems remain with respect to the techniques applied (insufficient information, physical interpretation of results or of the different cases presented, and no validation). Therefore, the paper still is unacceptable for publication.
