

## ***Interactive comment on “Accurate LAI retrieval method based on PROBA/CHRIS data” by W. Fan et al.***

### **Anonymous Referee #2**

Received and published: 20 January 2010

1 Authors should give a detailed parameters information or a parameters value table when using eq.(1) to simulate multi-angle reflectance, which is illustrated in Fig.1. 2 It's not clear to induce Eq.(2) from Eq.(1) 3 What is the background difference between the plots of Fig.2? 4 Simulation condition of Fig.(3) should be given in detail for it seems that the reflectance on NIR band is doubtful. 5 When estimation and validation the NDVI method using ground measurement data, how the 11 ground LAI is separated as modeling and validating subset?
