Received and published: 3 March 2009

I thank the referees for their appraisals on that paper. Although the subject is up-to-date and a few parts of the work seems well addressed, there is a consensus (and I agree after having read it again) that the paper requires substantial revisions (with due attention to the comments from Ref#1) before raising the paper to a quality as expected by readers of HESS. Therefore, I strongly suggest the Authors making efforts in this respect before deciding to submit a revised version for evaluation in HESS.
