

## ***Interactive comment on “Uncertainty in river discharge observations: a quantitative analysis” by G. Di Baldassarre and A. Montanari***

**F. Pappenberger (Editor)**

florian.pappenberger@ecmwf.int

Received and published: 6 March 2009

The authors have presented a paper to HESSD, which was described by the reviewers as 'Competent, but insufficient', 'Promising, but work to be done' and a work 'which has been done at a superficial level and does not go far enough'.

The authors responded in detail and depth to the comments by the reviewers and hopefully sparked an interesting discussion. Moreover, they have promised a substantial review and to incorporate a large volume of the suggestions. One reviewer did respond and pointed out that he is 'eager to read your new version'.

The majority of the reviewers suggested major revisions. Additionally, the authors responded well to the raised points. Therefore, the paper could be accepted into HESS

after substantial revisions including an additional review process.

I am very grateful for the comments made by the reviewers which help to improve the standard of HESS and thank the authors for submitting to HESSD,

Regards, florian
