

Interactive comment on “Modeling nutrient in-stream processes at the watershed scale using Nutrient Spiralling metrics” by R. Marcé and J. Armengol

M. Sivapalan (Editor)

sivapala@uiuc.edu

Received and published: 11 April 2009

The authors have been well served by the discussion of this paper in HESS(D). Based on these discussions and my own interest and reading of the paper, I have not seen any concerns that can be satisfactorily addressed by the authors. It is an interesting paper that should eventually be published - however, for publication, the authors must spend considerable time in addressing the concerns of the authors, discuss the ramifications of the simplifying assumptions they have made, and point to how future work can extend these analysis with more more careful modeling and monitoring. I look forward to their responses to the reviewers and the resulting completely revised manuscript.
