Received and published: 29 July 2010

The paper is a good contribution to the research literature and uses sound well accepted techniques stepwise regression and related works. I am happy to accept this paper but does need an editing of the paper by the authors; for example one can not start the Section on Theory, by saying "Good literature" rather should say " A number of reviews can be found in the the existing literature on baseflows and recession analysis (references) etc.

A simple editing by the authors should be sufficient.
