

***Interactive comment on “Modeling hydrological
processes influenced by soil, rock and vegetation
in a small karst basin of southwest China” by
Z.-C. Zhang et al.***

Anonymous Referee #2

Received and published: 27 March 2010

The paper is well organised. However, minor, but crucial, revisions are needed: How soil moisture was measured? Is Guelph permeameter used at what depth, namely how were obtained the data for the different layers? How were determined the other soil data, like field capacity and m?

Interactive comment on Hydrol. Earth Syst. Sci. Discuss., 7, 561, 2010.
