I found the paper interesting and the approach is interesting when applying at regional scales. I suggest to clarify which kind of erosion processes you measure. I understand that the methods can not contribute with sheet overland flow erosion rates, and that only soil erosion due to gully erosion (concentrate flow) is measured. This is due to the accuracy of the method. I yes, you need to change your title into the following: Identification and mapping of gully erosion areas.... Page 138. Line 10. Should be "to degradation by Simeonakis and Drake (2004)

C34

In your conclusions, the first sentence should be removed. No necessary

Sincerely, Artemio Cerdà
