

Interactive comment on “Probabilistic modelling of rainfall induced landslide hazard assessment” by S. Kawagoe et al.

Anonymous Referee #1

Received and published: 15 February 2010

Dear editor, In my opinion, the article here presented needs a major revision. Authors do not have concepts as susceptibility, hazard or risk, clear. They use them confusingly when in bibliography these concepts are well defined. So, also a depth bibliographic revision is needed. Finally, authors should be invited to rewrite this paper.

I will try to include interactive comments in other moment, in order to corroborate my decision. Thank you very much.
