Dear colleague (To Reviewer 1),

First, let me thank you for the review provided.

Reading the reply from the authors, there are some points that I would like to clarify with you. In particular, I would appreciate if you could assess the validity and quality of the answers provided to points 8.S2 and 9.S3, where the lack of validation may represent a serious drawback to show the reliability of the proposed approach.

Discussion Paper

Please, could you provide your vision on this point: how the lack of this validation potentially affects the quality of the paper and the possibility to really assess the validity of the proposed approach?

many thanks
