Interactive Comment

## Interactive comment on "Quantifying the impact of climate change on water resources at the basin scale on five continents – a unified approach" by M. C. Todd et al.

## Anonymous Referee #1

Received and published: 6 December 2010

The paper present a very interesting study on catchment-scale hydrology based on a unified set of past and future climate scenarios. The methodology to generate the model input is clearly described, the results are discussed in detail. The paper is part of a special issue. Therefore, the paper covers in the introduction and discussion part more than the results directly presented. If this is intended by the editor, I recommend to publish the paper "as is".
