Interactive Comment

Interactive comment on "Estimating river discharge from earth observation measurement of river surface hydraulic variables" by J. Negrel et al.

W. Wagner (Editor)

Received and published: 1 February 2011

I would like to thank the two reviewers for their in-depth reviews of the paper and the authors for their response. The paper discusses indeed a very interesting approach for estimating river discharge from earth observation data. With the increasing availability and accuracy of the remote sensing data approaches like this will certainly grow in importance. Nevertheless, the paper needs a major revision addressing all the comments of the reviewers and will have to undergo a second review.
