This paper is of potential interest to readers of Hydrology and Earth System Sciences Journal. I will recommend accepting the manuscript only when the comments below are appropriately addressed. Overall, my comment on this manuscript is more than minor revise. 1. It is highly recommended to enhance the introduction section. 2. A thorough discussion on the advantages and limitations of the method should be provided in the conclusion. 3. There are few English editorial errors.

Interactive comment on Hydrol. Earth Syst. Sci. Discuss., 8, 5263, 2011.
