Received and published: 6 June 2011

Thanks to the reviewer for the very useful and detailed corrections and suggestions. We are already looking for data in order to compare the flooded area simulated with in situ evidence. By the moment we know that during the simulated events there were some complaints from people living in the study area. Description on the wave conditions will be reduced, outlining only the main aspects. We agree with suggestions in Q3, and we will analyse expected conditions due to the climate change, as reported by the IPCC scenarios.
