Interactive comment on “Diffuse hydrological mass transport through catchments: scenario analysis of physical and biogeochemical uncertainty effects” by K. Persson et al.

B. Schaeffli (Editor)

bettina.schaeffli@epfl.ch

Received and published: 21 July 2011

All three reviewers conclude that this manuscript is overall well written and that it represents a potentially valuable contribution to HESS. Since reviewer 3 calls into question some of the conclusions and the generality of the obtained results, I would like to invite the authors to provide a detailed answer to this comment before preparing a revised version, which should address also all other detail comments of all three reviewers.
