Dear Dr. Nagare,

after reading your paper in detail I agree with both reviewers and Manfred Staehli this study is of high interest for the readers of HESS and based on a very sound experimental setup. However, I also agree with referee #1 that several major points need to be clarified before the study is acceptable. I encourage you to properly address these points and to reduce the number of figures to a necessary amount within the revised manuscript.

C3755

Best regards,

Erwin Zehe
