Interactive comment on “Comparison of hydrological model structures based on recession and low flow simulations” by M. Staudinger et al.

M. Staudinger et al.

maria.staudinger@geo.uzh.ch

Received and published: 27 September 2011

Line 3-6 on C4204 contains a broken sentence. The full sentence should be as follows: "As the parameters of the snow routine still might interact with other routines we suggest to amend the discussion by a section on the interaction of parameters. Further we would suggest to add a section on processes that were not included in FUSE like snow processes and other reservoir concepts."
