Received and published: 14 March 2011

Dear authors,

having read the comments of both reviewers, stating that the paper lacks sufficient novelties and that there are some serious deficiencies with respect to the modelling, I have to conclude that this manuscript should be rejected for publication in HESS.

I believe that the paper has to be reworked completely. If the authors would consider HESS for the reworked version, their contribution shall be regarded as a new submission, which will undergo the full review process.
