Received and published: 27 November 2011

Dear Authors,

You have received comments from two anonymous reviewers and two other readers. All parties were broadly supportive of the study, and raised valuable, but largely minor technical points, that I hope will be addressed in your revised manuscript, particularly in terms of clarifying concepts and definitions, and considering the issues of representativeness and the challenges of upscaling your results. Based on your responses to the comments I have no doubt you will address these issues comprehensively, and I look forward to receiving the revised manuscript.

C5099

Yours truly

Sally Thompson
