

## ***Interactive comment on “Probing on suitability of TRMM data to explain spatio-temporal pattern of severe storms in tropic region” by A. Akbari et al.***

### **Anonymous Referee #1**

Received and published: 5 December 2011

The paper focuses on the ability of TRMM rainfall estimates to explain spatio-temporal pattern of 3-hourly rainfall over a hydrologically well instrumented watershed. This is a simple analysis not dissimilar to 3rd year student projects in hydrology. Much more elaborated analyses have been published in the past. I cannot see the new contribution of this paper.

### Recommendation

This is a very limited study that is clearly less than the least publishable unit. I therefore recommend rejection. I would encourage the authors to publish their findings once a more substantial contribution has been achieved.
