Received and published: 9 December 2011

Dear Drs Sopan Patil and Marc Stieglitz,

I received the report from two referees on your manuscript titled “Controls on hydrologic similarity: role of nearby gauged catchments on prediction at an ungauged catchment.”

My apologies for the rather slow turnaround. To find reviewers is becoming a hard task. With regret, I must inform you that after evaluating the manuscript based on the reviews

C5186

comments and suggestions, your manuscript cannot be accepted for publication in HESS. Manuscript describes an interesting study that fits adequately the HESS subject Area. However, Reviewer #1 highlights two severe concerns about the model used in your predictions that undermine your conclusions and reviewer #2 focuses his doubts on the experimental design.

I would like to thank you very much for forwarding your manuscript to HESSD for consideration. I am sorry to disappoint you on this occasion. However, I believe that both reviewers produced interesting and stimulating comments that will assist in improving substantially this study and publishing this work in the future.

Sincerely,

Andrea Butturini (associate Editor)
