Received and published: 20 January 2012

We would like to thank the reviewers for their thoughtful review of the manuscript. They raise important issues and their inputs are very helpful for improving the manuscript. We agree with almost all their comments and we are revising our manuscript accordingly.

In the new revised version, we state the hypothesis and the implications of our work more clearly than before. Moreover, we are including all reviewers' suggestions and clarifying the text when needed. We are confident that the new version of the

C5819

manuscript will be greatly improved.

We have attached a pdf file with our detailed responses to each of the reviewer's comments. We include how we have revised things, or if we have slightly disagreed with something, we stated why. We hope that the reviewers will find our responses to their comments satisfactory, and we are willing to finish the revised version of the manuscript including any further suggestion that the reviewers may have.

Sincerely,

Susana Bernal and Francesc Sabater
