Thank you for your interest to comment on our paper. 1-This statement “The use of TRMM data is inappropriate” is our finding and before this study we could not claim for this statement. 2-“The paper is written with a structure that is not up to the standards of scientific journals” We tried to cover this weakness by rewriting some paragraphs and some irrelevant parts were deleted. We added some notes to results and discussion and finally some description added for the tables and figures.
