Received and published: 29 January 2012

The discussion phase (Hess-d) on this manuscript is close to completion, with the final comments coming from the authors only. I would take this occasion to thank the referees for their active participation in this task as well as the authors for their responses. After having read again the paper and the various comments, it is quite clear that the work has a very good scientific relevance. However, I do believe that the manuscript requires a substantial revision as well as a restructuring and rewriting

C5891

work. Overall, the scientific message embedded in this paper should be conveyed more efficiently to the readership.
