Received and published: 20 February 2012

All reviewers concluded that the technical note is of interest for the readers of HESS and that it could be considered for publication after some revisions and additional explanations. I would like to invite the authors to submit a revised version addressing all the comments and namely better explaining some of the points raised by the reviewers. I also would like to invite them to pay a particular attention to not use statistical jargon which might not be understood by the public of our journal.
