Received and published: 8 May 2012

The manuscript by Michailovsky et al. deals with the use of satellite radar altimetry in the Zambezi river basin. Two referees have provided comments and critiques to this manuscript and the authors have replied to them. Both referees recognized the good scientific quality, but they both recommended a major revision of the paper. Thus, I would invite the authors to perform a major revision of this paper by addressing all the referees' comments before resubmission to HESS. Resubmission does not ensure a final publication in HESS and I will carefully assess and most likely forward the new version to the original or new referees for further review.

Kind regards,
