Received and published: 29 June 2012

According to the suggestion made by the reviewers and the editor, a new revised version of the manuscript needs to be submitted based on several constructive comments.

The authors kindly accept the suggestion and consequently a new version of the paper will be prepared and submitted. The new version will be focused on hypothesis testing rather than model development, including a better illustration of the different hypotheses tested and parameter uncertainty. In addition, model equations and the representation of plant transpiration and overland flow will also be improved. The ma-
