Dear Dr. Woods,

Thank you for the positive comment. We agree with your viewpoint.

You are correct on the potential side of the current works on developing a generalized knowledge by proper identifying the covariances of significance. The current study is an initial outline on how covariance-based correction terms (Eq. (8)) could be taken into account in order to develop practical method in temporal up-scaling. It is the matter of learning to walk before running.

C3105

We were unaware of the literatures when we first prepared the manuscript. We will study them and incorporate them into an up-coming revised manuscript.

Best regards,

Wee Ho Lim & Mike Roderick
