Dear Dr. Woods,

Thank you for the positive comment. We agree with your viewpoint.

You are correct on the potential side of the current works on developing a generalized knowledge by proper identifying the covariances of significance. The current study is an initial outline on how covariance-based correction terms (Eq. (8)) could be taken into account in order to develop practical method in temporal up-scaling. It is the matter of learning to walk before running.

We were unaware of the literatures when we first prepared the manuscript. We will study them and incorporate them into an up-coming revised manuscript.

Best regards,

Wee Ho Lim & Mike Roderick
