

## ***Interactive comment on “Hillslope characteristics as controls of subsurface flow variability” by S. Bachmair and M. Weiler***

**E. Morin (Editor)**

msmorin@mssc.huji.ac.il

Received and published: 5 August 2012

The two review reports received for this paper were generally positive and emphasized that it is an important study and a well written paper. However, few (mainly minor) comments were raised. Some clarifications are needed on event selection, additional parameters that could potentially improve the analysis and more. Recommendations that will benefit the readers are also provided by the reviewers (e.g., a list of abbreviations or a predictors table). The authors are requested to address all reviewer comments detailed in the reports.
