We would like to thank Anonymous Referee 2 for Her/His detailed reading of our article, kind comments and so positive assessment. As She/He suggests we have noted the first Referee’s minor corrections and we introduced them in the revised version of the manuscript. The main changes we have made are the following:

- we slightly modified the title to: “Uncertainty in computations of the spread of C3926

warm water in a river – lessons from Environmental Impact Assessment case study”;

- we changed the abstract to make it more informative;
- we modified the conclusions in the mode proposed by Referee 1;
- we modified the section on the longitudinal dispersion coefficients to be more clear to the readers.

According to both referees’ suggestions we have asked a native speaker to proofread our article and we have corrected the text according to His suggestions.

We do hope that after implementing comments and suggestions from both Referees the paper reads better now and fulfills the standard of the journal.
