Received and published: 4 September 2012

The authors sincerely thank the reviewers for their elaborate review and their useful comments. The fact that the method is deemed innovative and of high interest strengthens us in our future research aims.

The comments that we have replied in as much detail as we deemed necessary will hopefully give an insight in how we will change these in the next version of the paper. For the specific comments (mostly minor comments) that we have not replied to we will change the texts as asked without further explanation.

The detailed answer are in a pdf attached to this comment.

C4105
