

Interactive comment on “A mechanistic description of the formation and evolution of vegetation patterns” by R. Foti and J. A. Ramírez

E. Zehe (Editor)

erwin.zehe@kit.edu

Received and published: 17 September 2012

Dear Dr. Foti,

I very much agree with both reviewers that the proposed study may provide valuable insights into the underlying mechanisms that control formation of vegetation patterns in semi-arid areas. However, I also agree that the underlying methodologies and the model should be much better explained to allow the reader a thorough interpretation and evaluation of the presented results. I kindly advise you to address this key point in the revised manuscript.

Best regards,
