

Interactive comment on “Reframing hydrology education to solve coupled human and environmental problems” by E. G. King et al.

T. Wagener (Editor)

thorsten.wagener@bristol.ac.uk

Received and published: 24 September 2012

Dear Lizzie,

The reviewers make some good comments that should help to improve the paper. I strongly encourage you to have another go at the figures. Three box-diagrams of this type will not be very interesting to look at. Given the interesting research you are all doing, I think you can do better than that. It might also be nice to include photographs of previous students on field trips etc.

I encourage you to address all the comments carefully in the manuscript, and then submit a revised version for consideration in HESS.

C4343

Best wishes,

thorsten
