All tables with chemical analysis results have too many significant digits. The number of digits should reflect the precision of the analysis. In most cases 3 digits would be reasonable. Reply: they have been revised.

Table 3: It would be a good idea to include the lithology of at least the screened/sampled interval. Reply: this will be added.

C4414

Fig. 1: It would be good to include the scale on the small inset maps - especially because it appears to be quite different. Reply: this will be added.

Fig. 6: CL -> CI Reply: it has been revised.
