

***Interactive comment on “Gains from modelling  
dependence of rainfall variables into a stochastic  
model: application of the copula approach at  
several sites” by P. Cantet and P. Arnaud***

**Anonymous Referee #1**

Received and published: 2 October 2012

An identical version of this paper was already submitted to Atmospheric Research (AR) journal and rejected. Since the content was not changed at all, my negative opinion on the proposed methodology is not changed as well. I can provide a copy of the previous AR submission and my previous review report under Editor's request.
