Received and published: 30 October 2012

Dear Authors and dear Referee #1, I am very grateful to Referee #1 for having so kindly accepted to act as a Referee and for submitting his/her comments so promptly.

I would, nonetheless, clarify to the Authors - as far as the Comment #9 is concerned - that I fully agree that "the manuscript could be substantially improved by relying and citing more on recent literatures" and I am sure that the cited works are certainly interesting and would be useful to the Authors' research in general, but I believe that there is no need for the Authors to cite all of them, but only those that the Authors believe are really inherent to the presented work.

This of course holds for any suggestion of references that may be submitted by any Editor, Referee or Reader.

Best regards, Elena Toth
