

Interactive comment on “Scale effect on overland flow connectivity at the plot scale” by A. Peñuela et al.

E. Morin (Editor)

msmorin@mscc.huji.ac.il

Received and published: 25 November 2012

In general, the two reviews of this manuscript were positive, but raised some important comments, that the authors have responded to. The main comments concern the issue of scale and suggestions to additional analyses that can contribute to the generality of this work (such as dimensionless analysis). The authors are required in the revised manuscript to clearly state (and explain) to which cases the results of their study can be applied as well as to refer to potential methodologies (as suggested by reviewer #2) for future studies.
