

## ***Interactive comment on “Catchment classification based on characterisation of streamflow and precipitation time-series” by E. Toth***

### **Anonymous Referee #1**

Received and published: 5 December 2012

The authors have suitably responded to my suggestions. I believe this study will make good contribution to hydrological fields, and I recommend this paper to be published in your distinguishing journal.

I would like to take this opportunity to further clarify two of my previous Comments (see interactive Comments 3 and 4).

Interactive Comments 3: The authors have clearly presented in text how the six streamflow signatures were clustered into three different classes (In page 10814, lines 13 to 21). My suggestion is that it would be nice to show the clustered results of the six streamflow signatures in a topology map.
