Dear Mr. Doppler,

I read the reviewer comments and your manuscript. I agree with both reviewer that the manuscript presents a rare and very valuable dataset. It nevertheless needs considerable revisions before it can be accepted for publication.

As reviewer 2 I am a fan of the old school traditional structure of a scientific paper. This facilitates both the review and targeted reading. The second major point concerning the adsorption kinetics seems well reasoned and should be clearly discussed in the revised manuscript.

C659

Best regards and good success with the revision.

Erwin Zehe
