Thanks to the reviewers for the valuable comments and to the authors for the constructive responses. Based on this discussion, I am confident that the authors will be able to utilize the comments to improve their manuscript.

Reviewer 1 has two major suggestions, including more variables and looking at temporal aspects in more detail. While both are interesting and relevant, I here would tend to agree with the authors response, namely that the former might extend the study too far, but the latter would be a valuable addition, which would clearly strengthen the manuscript.

Re Fig 3, I agree with the reviewer that the color scheme/Scale is suboptimal as differences are hard to see.

I am looking forward to the revised version of this manuscript. Please pay close attention to all the reviewer comments.

Best regards, Jan Seibert
