

Dear Editor,

I am very happy that only minor iterations are necessary! Thank you very much for the thorough editing of our manuscript. I added a description of the arrows in the caption of Figure 6. However, I have trouble with the formatting issue of Table 1. I changed a small formatting error where a line was drawn one cell too long. But I guess you mean the apparent small lines, which indicate cell boundaries?! I was not able to delete those, they always appear when converting to a pdf. However, when you print the document or zoom in, those small lines disappear, so I think it is just a display problem?

Best regards,

Tanja Broder
