Changes in dissolved organic matter quality in a peatland and forest headwater stream as a function of seasonality and hydrologic conditions by Broder et al.

Review:

P1L20: „was also particularly exported“ is a strange expression – just „also“ or „particularly“ is sufficient (depending on what you want to say)

Figure 1: I am still a bit puzzled here: Why are both observations points within one catchment? It would make much more sense to distinguish catchments of each point, land use and soils. The dashed line is distracting.

P17L6: „SD“ means standard deviation? Why do you switch between precision here? Sometimes you use no, sometimes one digit for the concentration. In table 1 its 2! Please adjust that to a meaningful precision.

P6L18: use „larger“ instead of „greater“

P7L2: type „but showed“
