

Interactive comment on “Recent trends and variability in river discharge across northern Canada” by S. J. Déry et al.

S. J. Déry et al.

sdery@unbc.ca

Received and published: 16 September 2016

Please note that a supplement was added to this submission two days after the initial publication of the discussion paper. This brief delay in the submission of the supplementary materials occurred due to issues incurred during the initial upload of the documents. The supplementary document contains only one extended table (Table S1) with individual statistics of the mean, standard deviation and coefficient of variation in annual river discharge over five decades for the 42 rivers under study. Highly fragmented and regulated systems are highlighted in gray in the table. Comments on this supplementary table and the discussion paper itself are welcomed by the authors.
