Interactive comment on "Simulating cold-region hydrology in an intensively drained agricultural watershed in Manitoba, Canada, using the Cold Regions Hydrological Model" *by* Marcos R. C. Cordeiro et al.

J. Seibert

jan.seibert@geo.uzh.ch

In one of our MSc courses within the Earth System Sciences program at the University of Zurich the students were given the assignment to review selected manuscripts in HESS-D. This manuscript was one of the selected ones and as I found the student's review well-written and valuable, I want to share these comments here (see attached pdf).

Best regards,

Jan Seibert
