Interactive comment on "Future shift of the relative roles of precipitation and temperature in controlling annual runoff in the conterminous United States" *by* K. Duan et al.

J. Seibert (Editor)

jan.seibert@geo.uzh.ch

Received and published: 2 January 2017

We received an additional review report, which due to technical issues and a misunderstanding was not uploaded before. This reviewer highlighted an important issue with the manuscript, namely the use of of a temperature-index appraoch for evaporation estimation. The reviewer nicely describes, why this is a major concern with the study as it is. Please consider this very important reviewer comment.
