Received and published: 19 December 2016

A good discussion on an old subject - which indeed still needs attention. It can be also useful to remind young authors that "blind calibration" is worse than no calibration at all, and that "if you optimise something, first think well what is the objective function".

It can be seen that the authors appreciate the comments, and the (improved) version of the paper is expected.

Season's greetings to all!
