Supplement: Supporting Information

Table S1

Sequence of treatments in Watershed 6, a north-facing 8.9 hectare catchment.

Year	Treatment	References
1909-1923	The Coweeta Basin, including WS6, was commercially cut with ca. 30% reduction in basal area. Cutting progressed from low to high elevation; WS6 would have been the first area cut.	Elliott and Swank, 2008
1934	A weir was installed at the base of the watershed, and nine vegetation plots were measured across the east-side of the watershed.	Hewlett, 1961; Douglass and Swank, 1972
1928-1940	Chestnut blight (*Endothia parasitica* Murr.) killed the remaining *Castanea dentata* trees.	
1942	12% of the catchment (1.1 ha) along the stream was cut to determine the effect of cutting streamside vegetation on water yield.	Dunford and Fletcher, 1947
1958 , summer	Vegetation was measured in 37 plots prior to grass conversion.	
1958, fall	All merchantable timber was cut and removed. All remaining vegetation was cut, piled and burned. A seedbed was prepared by burning and soil scarification.	Hibbert ,1969
1959	Grass conversion by application of 1100 kg ha^{-1} limestone, 366 kg ha^{-1} NPK fertilizer, and 3.7 kg ha^{-1} fescue (*Festuca octiflora* Walter) grass seed across the entire watershed.	Hibbert, 1969
1960-1965	Woody sprouts were foliar sprayed with 2, 4, 5-T herbicide, annually for five years.	
1960	Application of 37 kg ha^{-1} NH$_4$-NO$_3$.	
1965	Application of 110 kg ha^{-1} NPK fertilizer and 27 kg ha^{-1} 60% potash.	
1966- early 1967	Three herbicides were used to eliminate the grass cover. Atrazine, paraquat, and 2,4-D were applied on the entire watershed except for a 3 m buffer strip on each side of the perennial stream.	Hibbert, 1969
1967	No further treatments, vegetation was allowed to revert to successional vegetation. For first several growing seasons, the entire area was dominated by a dense cover of herbaceous species.	Burt and Swank, 1992
1968	Vegetation was measured in 34 plots, the first growing season following treatment abandonment.	Burt and Swank, 1992
1982	15-year-old forest	Elliott et al., 1998
1995	28-year-old forest	Elliott et al., 1998
2012	45-year-old forest	This study.

Table S2

Common tree species across the eastern United States classified by hydrotype (mesophytic, semi-mesophytic, xerophytic)[a], xylem anatomy (diffuse-porous, ring-porous, semi-ring-porous, or tracheid)[b], and stomatal control (isohydric or anisohydric)[c].

Species	Hydrotype[a]	Xylem anatomy[b]	Stomatal control[c]
Acer rubrum	Mesophytic	Diffuse	Isohydric
Acer saccharum	Mesophytic	Diffuse	Isohydric
Acer pensylvanicum	Mesophytic	Diffuse	Isohydric
Betula alleghaniensis	Mesophytic	Diffuse	Isohydric
Betula lenta	Mesophytic	Diffuse	Isohydric
Betula papyrifera	Mesophytic	Diffuse	Isohydric
Carya spp.	Semi-mesophytic	Semi-ring	Intermediate
Castanea dentata	Semi-meophytic	Semi-ring	Anisohydric
Fagus grandifolia	Mesophytic	Diffuse	Isohydric
Fraxinus spp. (*americana, pennsylvanica*)	Mesophytic	Ring	Anisohydric
Liriodendron tulipifera	Mesophytic	Diffuse	Isohydric
Magnolia spp. (*acuminata, fraseri*)	Mesophytic	Diffuse	Isohydric
Nyssa sylvatica	Semi-mesophytic	Diffuse	Intermediate
Oxydendron arborea	Semi-mesophytic	Ring	Intermediate
Pinus spp. (*rigida, taeda, echinata, pungens, virginiana*)	Xerophytic	Tracheid	Isohydric
Pinus palustris	Xerophytic	Tracheid	Isohydric
Pinus strobus	Semi-mesophytic	Tracheid	Isohydric
Prunus serotina	Semi-mesophytic	Ring	Anisohydric
Quercus alba	Xerophytic	Ring	Anisohydric
Quercus coccinea	Xerophytic	Ring	Anisohydric
Quercus montana	Xerophytic	Ring	Anisohydric
Quercus rubra	Semi-mesophytic	Ring	Anisohydric
Quercus velutina	Semi-mesophytic	Ring	Anisohydric
Robinia pseudoacacia	Semi- mesophytic	Ring	Isohydric
Tilia americana	Mesophytic	Diffuse	Isohydric
Tsuga canadensis	Mesophytic	Tracheid	Anisohydric

Classifications were extracted from the literature; [a]hydrotype (Flatley et al., 2015), [b]xylem anatomy (Ewers et al., 2007) and [c]stomatal control (Roman *et al.*, 2015); [c]stomatal control of *Castanea dentata* based on *C. sativa* (Gomes-Laranjo et al., 2012).

Table 3

Mean density, basal area, total aboveground biomass, and leaf area index (LAI) for the treated

(WS6) and reference (WS14, WS18) watersheds overtime. Standard errors are in parentheses.

	WS6				
	1934	1958	1982	1995	2012
	N = 5	N = 37	N = 34	N = 34	N = 34

	WS14				
	1934		1969	1988-1992	2009-2010
	N = 30		N = 30	N = 30	N = 30
Density (stems ha^{-1})	2877		6178	3872	3672
	(158)		(472)	(576)	(322)
Basal area (m^2 ha^{-1})	27.21		26.18	29.52	36.93
	(1.55)		(1.11)	(1.525)	(1.85)
Biomass (Mg ha^{-1})	224.260		178.486	206.608	244.290
	(20.374)		(12.920)	(14.840)	(17.428)
LAI (m^2 m^{-2})	5.808		5.115	5.728	6.384
	(0.340)		(0.241)	(0.298)	(0.348)

	WS18				
	1934	1953	1969	1992	2009
	N = 8	N=8	N = 8	N = 7	N = 8
Density (stems ha^{-1})	3029	8025	7220	5196	4636
	(326)	(1611)	(1727)	(1337)	(1289)
Basal area (m^2 ha^{-1})	26.04	25.75	28.13	35.76	34.37
	(2.00)	(1.10)	(0.92)	(3.28)	(3.06)
Biomass (Mg ha^{-1})	190.844	148.424	183.742	218.356	208.079
	(28.758)	(12.837)	(9.641)	(29.9885)	(13.518)
LAI (m^2 m^{-2})	5.432	5.001	5.376	6.151	5.951
	(0.360)	(0.208)	(0.195)	(0.551)	(0.394)

In 1934, only percent cover of evergreen shrubs (*Kalmia latifolia* and *Rhododendron maximum*) was estimated for each plot. For all other years, diameter of evergreen shrubs was measured. The higher density in years 1953 and 1958 versus 1934 is partly due to evergreen shrub diameters not being measured or counted in the permanent plots in 1934.

Table S4

Watershed 14: mean density, basal area, aboveground biomass, and leaf area index (LAI) of species over time [1934, 1969,

1988-1992, and 2009-2010]. Standard errors are in parentheses.

Species in 1934	Density (stems ha^{-1})	Basal area (m^2 ha^{-1})	Aboveground biomass (kg ha^{-1})		LAI (m^2 m^{-2})
			Foliage	Total	
Castanea dentata	764 (119)	12.50 (1.44)	1,509 (175)	120,549 (17775)	2.506 (0.291)

In 1934, only percent cover of evergreen shrubs (*Kalmia latifolia* and *Rhododendron maximum*) was estimated for each plot. For all other years, diameter of evergreen shrubs was measured.

Table S5

Watershed 18: mean density, basal area, aboveground biomass, and leaf area index (LAI) of species over time [1934, 1953, 1969, 1992, and 2009]. Standard errors are in parentheses.

Species in 1934	Density (stems ha^{-1})	Basal area (m^2 ha^{-1})	Aboveground biomass (kg ha^{-1}) Foliage	Total	LAI (m^2 m^{-2})

In 1934, only percent cover of evergreen shrubs (*Kalmia latifolia* and *Rhododendron maximum*) was estimated for each plot. For all other years, diameter of evergreen shrubs was measured.

Table S6

Watershed 6: mean density, basal area, aboveground biomass, and leaf area index (LAI) of species over time: before (1934, 1958), during (1961-1965), and after grass-to-forest-conversion (1968, 1982, 1995, 2012). Standard errors are in parentheses. Proportional contributions of dominant species to the watershed totals are in brackets.

Species in 1934	Density (stems ha^{-1})	Basal area (m^2 ha^{-1})	Aboveground biomass (kg ha^{-1}) Foliage	Total	LAI (m^2 m^{-2})

In 1934, only percent cover of evergreen shrubs (*Kalmia latifolia* and *Rhododendron maximum*) was estimated for each plot. For all other years, diameter of evergreen shrubs was measured.

Figure S1

Mean (±SE bars) aboveground biomass for the dominant species in the **(a)** treated WS6, **(b)**
reference WS14, and **(c)** reference WS18 over time. Dominant species were *Castanea dentata*,
Quercus (montana, coccinea, rubra, velutina, alba), *Carya* spp., *Acer rubrum*, *Liriodendron
tulipifera*, *Robinia pseudoacacia*, and *Betula lenta*.
