Interactive comment on "Socio-hydrology from the bottom up: A template for agent-based modeling in irrigation systems" *by* Dimitrios Bouziotas and Maurits Ertsen

Dimitrios Bouziotas and Maurits Ertsen

bouziot@gmail.com

Received and published: 11 June 2017

We thank the reviewer for the positive assessment of our study. Similarly to our answer to Reviewer #2 on relating our model findings to results of previous uses and studies of the IMG, we stress that actual game results from humans and the reasons why the IMG would count as "real" have been published elsewhere. We will, however, provide clarified links and include more details in the current paper. We would like to refer to our general comments for more clarity on how we aim to improve the presentation of our proof of concept to capture key elements of the IMG. We thank the reviewer for the detailed additional minor comments, which we will work on.
